The Team¹

Engineer

“Engineers bear great responsibility, as they design the most complicated and important part of the STEM Racing project. Here, at NP Racing, this responsibility rests on one person - Lukáš. Being an engineer is very hard, since you have to possess a unique set of skills. You not only have to be very knowledgeable in the field aerodynamics and CAD Design, but you also have to be very handy. Their duty is to make the perfect car and ensure it doesn't have any flaws.”

The Team¹

Team leader

“A good team leader is essential, when it comes to creating something special. Not only do they have to be hardworking, smart and organised, but they also have to have the instinct to make the correct decision. That is where Matěj comes in. Not only he has all the skills needed, but he also doesn’t hesitate to help where needed.”

The Team¹

Communication

“It is very important to always have an overview about money. Eventhough having the right knowledge and determination plays a big role in a succesfull project, nothing can be done without money. Our finance administrator, Lukáš, dedicated himself to acquiring resources needed. He reached out to many companies and evetually secured a major sponsorship.”

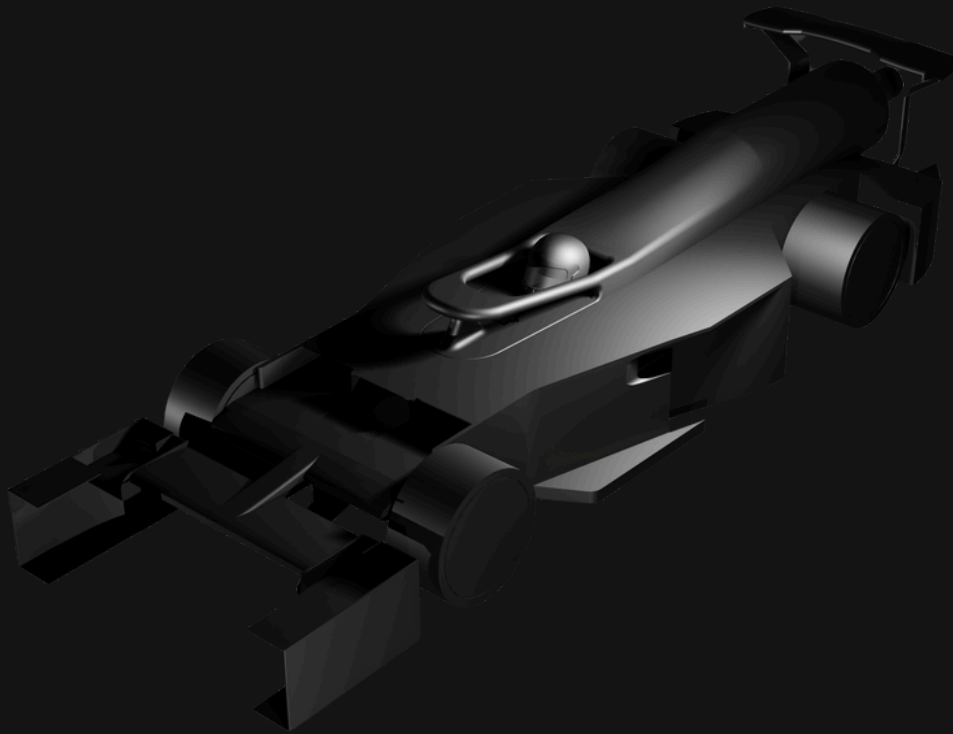

The Team¹

Networking

“Marketing is fundamentally the effort to get known. It is very important to have good marketing, as it can greatly influence our success. Adam is in charge of this department and he’s doing everything in his power to make us known. He makes entertaining content for our social media, contributes to the graphic design of our team and tries to build a solid brand identity.”

The Car²

The STEM Racing Professional Class Car is a precision-engineered machine where science meets speed. Every component is optimized through data-driven design— aerodynamic contours sculpted by computational fluid dynamics. Built to demonstrate the fusion of engineering disciplines—mechanical, and computational—it's not just a car; it's a rolling laboratory. Each lap is an experiment, a test of physics, teamwork, and innovation. This is STEM in motion—where theory hits the track and innovation takes the checkered flag.
